This statement is part of the curriculum produced by the Royal College of General Practitioners (RCGP) which defines the learning outcomes for the discipline of general practice and describes the skills you require to practise medicine as a general practitioner in the National Health Service (NHS) of the United Kingdom. Although primarily aimed at the start of independent work as a general practitioner, it must also prepare the doctor beyond the training period and provide support for a professional life of development and change.

KEY MESSAGES

- As a general practitioner (GP) you have an important role in the care of children and young people
- Most healthcare for children and young people is delivered outside the hospital setting
- Patients under 15 years of age comprise around 20% of the average GP list and account for one in four GP consultations
- School children visit the GP between two and three times a year, but this figure is doubled in the under-fives (who visit the GP an average of six times per year)\(^1\)
- A child’s and young person’s experiences in early life – and even before birth – have a crucial impact on their adult health and life chances
- There is an opportunity to promote health in all contacts with children, young people and families, and this should be targeted particularly at the vulnerable and socially excluded\(^2\)
- All general practitioners need to be competent in dealing with safeguarding matters concerning children
- GPs should be able to recognise the support needs of those children and young people who care for others
- General practitioners should recognise and respond to the needs of children and young people in special circumstances, through referral and joint working

---

\(^1\) Van Dorp F. Consultations with children *InnovAiT* 2011; 4(7): 54–61
**CASE ILLUSTRATION**

James, a 4-year-old boy who is accompanied by his parents, presents to you in morning surgery following the discovery that he has been diagnosed with acute lymphoblastic leukaemia (ALL).

The parents are seeking further information from you regarding the condition, management and prognosis, as the shock of the diagnosis during their initial hospital consultation meant that they could not ‘take a lot in’ at the time of diagnosis.

---

To help you understand how the GP curriculum can be applied to this case, ask yourself the following questions:

| Primary care management | How would I diagnose and manage ALL (perhaps bringing in the principle of recognising acutely ill children/rare diseases)?  
|                         | How confident am I to prescribe in this age group?  
|                         | What mechanisms are in place in my practice to ensure that cancer patients and their relatives are reviewed on a regular basis?  
|                         | What mechanisms exist in my practice to ensure that I am kept up to date with a cancer diagnosis?  
|                         | Which other members of the multidisciplinary team would I involve (e.g. school nurses, Macmillan team, oncology nurses, faith organisations, psychologist and family counsellors)?  
|                         | Which voluntary sector organisations might be helpful to James and his family? |
| Person-centred care     | How confident and competent am I in my communication skills in a challenging consultation?  
|                         | How confident am I in explaining prognosis?  
|                         | Which elements of the consultation models would be helpful in improving my skills in managing this case?  
|                         | How do I as the GP plan to follow up James and his family? |
| Specific problem-solving skills | How should I investigate early childhood cancers?  
|                                | What should I say to parents if I suspect a sinister diagnosis?  
|                                | How might I manage the psychological impact of disease in the family?  
|                                | How can I ensure that the out-of-hours provision for this child and family is smooth? |
| A comprehensive approach     | Should I be doing more to promote an awareness of childhood cancers in my clinical practice and how do I do this?  
<p>|                                | How can I manage issues around school absence? |</p>

LEARNING OUTCOMES

The following learning outcomes or objectives relate specifically to the management and care of children and young people. These learning outcomes are in addition to those detailed in the core statement, Being a General Practitioner. The core statement and this statement should be used in conjunction with the other curriculum statements. In order to demonstrate the core competences in the area of care of children and young people you will require knowledge, skills and attitudes in the following areas:

The RCGP areas of competence

1 Primary care management

This area of competence is about how you manage your contact with patients, dealing competently with any and all problems that are presented to you. (This area of competence is not limited to dealing with the management of the practice.)

This means that as a GP you should:

1.1 Manage and appropriately treat common and rare but important paediatric conditions encountered in primary care, such as:
   1.1.1 Neonatal problems: e.g. birthmarks, feeding problems, heart murmurs, sticky eye, jaundice
   1.1.2 Constipation, abdominal pain (acute and recurrent)
   1.1.3 Pyrexia, febrile convulsions
   1.1.4 Cough/dyspnoea, wheezing including respiratory infections, bronchiolitis
   1.1.5 Otitis media
   1.1.6 Sensory deficit, especially deafness
   1.1.7 Gastroenteritis
   1.1.8 Viral exanthems
   1.1.9 Urinary tract infection
   1.1.10 Meningitis
   1.1.11 Epilepsy
   1.1.12 Chronic disease: e.g. asthma, diabetes, arthritis, palliative conditions such as neurological disorders, and intellectual disability (see also statement 3.11 Care of People with Intellectual Disability)
   1.1.13 Non-accidental injury, maltreatment and neglect
1.1.14 Mental health problems such as attention deficit hyperactivity disorder (ADHD), depression, eating disorders, substance misuse and self-harm, autistic spectrum disorder and related conditions (see also statements 3.10 Care of People with Mental Health Problems and 3.14 Care of People who Misuse Drugs and Alcohol)

1.1.15 Psychological problems: e.g. enuresis, encopresis, bullying, school refusal, behaviour problems including tantrums

1.1.16 Assessment of child and young person development (physical and psychological)

1.2 Be aware of the early presenting symptoms of childhood cancers and possible differentials, e.g. retinoblastoma, leukaemia, medulloblastoma, Wilms tumour

1.3 Appropriately manage common symptoms like vomiting, drowsiness, developmental delay, infantile colic, ‘failure to thrive’ and growth disorders, behavioural problems, obesity

1.4 Manage primary contact with children and their families – and, with older children, on their own

1.5 Demonstrate an understanding of the importance of multiagency working (working across professional and agency boundaries) and the principles of information sharing

1.6 Co-ordinate care with other primary care professionals, paediatricians and other appropriate specialists, leading to effective and appropriate care provision, taking an advocacy position for the patient or family when needed, including for palliative and end-of-life care

1.7 Safeguard children and young people, understanding that:

1.7.1 The welfare of the child and young person must be the paramount consideration

1.7.2 In dealing with vulnerable children and young people, a focus on the family risks losing sight of the child

1.7.3 Often children and young people in special circumstances are ‘invisible’ to the system because they live in the shadow of their parents’ problems

1.7.4 Dealing effectively with maltreatment of children and young people involves recognising the clinical features, knowing about local arrangements for child protection, referring effectively and playing a part in assessment and continuing management, including prevention of further abuse

1.8 Describe the principles of child-focussed clinical governance and risk management such as safety of treatment and care, safeguarding, the use of evidence-based practice, clinical audit, effective prescribing and referrals

1.9 Ensure that parents or carers, children and young people receive information, advice and support to enable them to:

1.9.1 Manage minor illnesses themselves, using community pharmacists and triage services where appropriate

1.9.2 Access appropriate services when necessary

1.9.3 Have shared responsibility for self-care of chronic conditions and exacerbations

1.9.4 Use repeat prescribing and reviews appropriately

1.9.5 Access support groups

---

3 Children in Scotland. The paramountcy principle, embodied in (i) 1989 Children Act: ‘When a court determines any question with respect to … the upbringing of a child … the child’s welfare shall be the court’s paramount consideration’ and also (ii) the Children (Scotland) Act 1995
1.10 Prescribe and advise appropriately about the use of medicines in children and young people, being competent at:

1.10.1 Calculating drug doses
1.10.2 Understanding the risks and benefits of medicines in relation to children
1.10.3 Understanding the needs of ethnic minorities, and cultural differences in beliefs about illness and the use of medicines

1.11 Demonstrate an understanding of the welfare of the unborn baby by:

1.11.1 Being aware of the impact of parental problems including domestic violence and abuse, substance and alcohol misuse and mental health problems
1.11.2 Being able to recognise the symptoms and presentations of such problems and to make a sensitive enquiry if concerned
1.11.3 Providing information about, or referral to, local services for women who have substance and alcohol misuse problems as they are at greater risk of problem pregnancies and their care should be provided by an integrated multidisciplinary and multiagency team

1.12 Have an awareness of disease prevention, well-being and safety in children and adolescents, including in the following areas:

1.12.1 Prenatal diagnosis
1.12.2 Breastfeeding
1.12.3 Healthy diet and exercise for children and young people
1.12.4 Social and emotional well-being
1.12.5 Keeping children and young people safe, safeguarding, accident prevention
1.12.6 Immunisation
1.12.7 Avoiding smoking, avoiding the use of volatile substances and other drugs, and minimising alcohol intake
1.12.8 Reducing the risk of teenagers getting pregnant or acquiring sexually transmitted infections

2 Person-centred care

This area of competence is about understanding and relating to the context of your patients as individuals, and developing the ability to work in partnership with them.

This means that as a GP you should:

2.1 Adopt a family-centred approach in dealing with patients, their families and their problems. This requires:

2.1.1 Effective communication and engagement (listening to and involving children and young people, and working with parents, carers and families)
2.1.2 An understanding of the importance of supporting parents and having the skills to do this, noting that the role of fathers in parenting their children and teenagers is frequently overlooked. Their contribution to their child’s development and well-being is important. All GPs should be able to support fathers and have the skills for engaging with fathers as well as mothers
2.1.3 Being aware of the child that is ‘hidden’ behind the parents’ symptoms and illnesses
2.2 Develop and apply the primary care consultation to bring about an effective doctor-patient-family relationship to enable parents or carers, children and young people to:

2.2.1 Participate in their own care-planning and delivery

2.2.2 Be routinely involved and supported in making informed decisions and choices about care, taking into account age and development, increasing autonomy with age, and the need for confidentiality balanced with the parents’ need for information

2.2.3 Achieve concordance, including active listening and shared decision-making with you as their GP

2.2.4 Receive information on medicines in a clear way that is appropriate to their understanding as children, young people and parents

2.3 Provide longitudinal continuity of care as determined by the needs of the patient and family:

2.3.1 Understanding the problems with transitions from child to adolescent, and from adolescent to adult. This applies to all children but especially the vulnerable

2.4 Support young people with a chronic disease and their parents to negotiate the process of transition

### 3 Specific problem-solving skills

This area of competence is about the context-specific aspects of general practice, dealing with early and undifferentiated illness and the skills you need to tolerate uncertainty, and marginalise danger, without medicalising normality.

This means that as a GP you should:

3.1 Use a decision-making process determined by the prevalence and incidence of illness in the community and the specific circumstances of the patient and family:

3.1.1 Being aware of normal growth and development in children and young people

3.1.2 Being aware of neonatal problems including jaundice and feeding problems, breastfeeding and nutrition

3.2 Manage conditions and problems which may present early and in an undifferentiated way, and recognise a seriously ill child (and intervene urgently when necessary) by:

3.2.1 Having a thorough understanding of normal development, and being able to recognise delayed development through childhood and adolescence

3.2.2 Recognising normal growth, and dealing with faltering growth and failure to thrive

3.2.3 Recognising children and young people who are at risk in some way, whether physically, mentally or emotionally

3.2.4 Being aware that consultations about children may be a presentation of a mother’s postnatal depression; and being aware of the effect that postnatal depression may have on her children

3.2.5 Recognising the significance of non-attending

3.2.6 Showing concern and following up when children and young people fail to attend appointments (in primary or secondary care), given that they are reliant on their parent or carer to take them to the appointment

3.2.7 Being conscious that failure to attend can be an indicator of a family’s vulnerability, potentially placing the child’s welfare in jeopardy
3.2.8 Acknowledging that failure to attend can be an indicator that services are difficult for families and young people to access or considered inappropriate, and need reviewing

---

### 4 A comprehensive approach

This area of competence is about how you as a general practitioner must be able to manage co-morbidity, co-ordinating care of acute illness, chronic illness, health promotion and disease prevention in the general practice setting.

This means that as a GP you should:

4.1 Manage simultaneously both acute and chronic problems in the child, young person and family by:
   4.1.1 Assessing children and young people’s developmental needs in the context of their family and environmental factors including school and community, and parenting capacity
   4.1.2 Understanding the key vulnerability factors for children and young people in special circumstances, such as illness in the family, and responding to their needs, including through referral and joint working
   4.1.3 Recognising inequalities and ethnic diversity, and addressing them proactively

4.2 Promote health and well-being by applying health promotion and disease prevention strategies appropriately, and using them to detect problems that may already be present but have not yet been detected, by:
   4.2.1 Being aware of your role as a GP in promoting and organising immunisation
   4.2.2 Being aware of your role as a GP in the prevention of accidents

4.3 Recognise inappropriate eating habits such as the development of anorexia nervosa, bulimia or morbid obesity and make appropriate referrals if specialist help is required

4.4 Describe the issues involved in delivering services for young people relating to access, communication, confidentiality and consent

4.5 Provide access for young people to confidential contraceptive and sexual health advice services that are tailored to meet their needs

4.6 Recognise the importance of supporting parents who have special needs

4.7 Recognise the needs of children of parents with substance or alcohol misuse, mental health or domestic violence and abuse problems; parents who are teenagers; and parents with severe chronic or short-term conditions that affect their capacity to look after their children. Some families may need referral for multiagency assessment and support services: this may include referral to the health visitor for a comprehensive family needs assessment to understand and address the impact of the parents’ needs on the children’s health and development

---

### 5 Community orientation

This area of competence is about the physical environment of your practice population, and the need to understand the interrelationship between health and social care, and the tensions that may exist between individual wants and needs and the needs of the wider community.
This means that as a GP you should:

5.1 Reconcile the health needs of patients and their families, and of the community in which they live, in balance with available resources. This requires:
   5.1.1 Understanding the legal and political context of child and adolescent care
   5.1.2 Understanding the organisation of care – care pathways and local systems of care
   5.1.3 Assessing needs, including the assessment framework

### 6 A holistic approach

This area of competence is about your ability to understand and respect the values, culture, family structure and beliefs of your patients, and understand the ways in which these will affect the experience and management of illness and health.

This means that as a GP you should:

6.1 Support transitions (maximising children’s achievements and opportunities, and understanding their rights and responsibilities)
6.2 Describe the impact of disability on the child, young person and their family
6.3 Promote physical health, mental health and emotional well-being by encouraging children, young people and their families to develop healthy lifestyles
6.4 Describe your role as a GP in dealing with enuresis, sleep disturbance, bullying and school refusal

### The essential features of you as a doctor

The three essential features (EFs) below are concerned with the features of you as a doctor which may influence your ability to apply the core competences to real life in the work setting.

### EF1 Contextual features

This essential feature is about understanding your own context as a doctor and how it may influence the quality of your care. Important factors are the environment in which you work, including your working conditions, community, culture, financial and regulatory frameworks.

Examples of this are:

   EF1.1 Describing the importance of the health care needs of the paediatric population of your community and the socio-economic and cultural features that might affect health
EF1.2 Describing the importance of the workload issues raised by paediatric problems, especially the demand for urgent appointments and the mechanisms for dealing with this

**EF2 Attitudinal features**

This essential feature is about your professional capabilities, values, feelings and ethics and the impact these may have on your patient care.

Examples of this are:
- **EF2.1** Your attitudes to treating children and young people equitably, and with respect for their beliefs, preferences, dignity and rights
- **EF2.2** How you respect the sensitivities of young people about their health attitudes, behaviours and needs
- **EF2.3** How you manage the issues of confidentiality and consent
- **EF2.4** How and when you share information with other agencies

**EF3 Scientific features**

This essential feature is about the need to adopt a critical and evidence-based approach to your work, maintaining this through lifelong learning and a commitment to quality improvement.

Examples of this are:
- **EF3.1** Maintaining your knowledge and skills in the examination of the newborn child and the six-week check
- **EF3.2** Being familiar with and accessing the best evidence about clinical management and prescribing of medicines for children
- **EF3.3** Using significant event meetings and audit as tools on which to reflect on your clinical practice in children
- **EF3.4** Using appraisal and your personal development plan in developing a clinical area of interest or refine existing skills
- **EF3.5** Reflecting on case-based discussions around child health and the identification of learning needs
- **EF3.6** Reflecting on this curriculum at regular intervals during your GP training and after qualification
- **EF3.7** Reflecting on aspects of protecting children and attending training
LEARNING STRATEGIES

Work-based learning – in primary care

Primary care is the ideal place to learn about the health of children and young people in the context of where they live and go to school. It is important that as a GP specialty trainee you are involved in antenatal and postnatal care, and that you follow a few babies through their first year of life. Attending an outpatient or community outreach clinic with a child and their parent is an ideal way for you to gain a better understanding of the patient’s journey. Exposure to baby clinics and immunisation clinics is essential. Exposure to consultations with young people will provide you with opportunities for learning about communication skills, as well as teamworking and specialist needs in prescribing. Look for opportunities for a visit or a placement at a dedicated youth clinic, a Child and Adolescent Mental Health clinic or attend a health session aimed at young people in a community setting.

As a GP trainee you should also take the opportunity to visit patients in their homes, attend case conferences and participate in the work of the multiprofessional team, which will include practice nurses, midwives, health visitors, school nurses and social care workers.

Work-based learning – in secondary care

Some GP training programmes contain placements of varying lengths in a paediatric department. These will give you exposure to acutely ill children, young people and those who have been admitted to hospital for specialist treatment. Specialist care is, however, mainly provided in outpatient clinics and increasingly in primary care settings – particularly for children and young people who have rare conditions or require specialist treatment, or who have proven difficult to be managed by their GP. These are ideal places for you as a trainee to see concentrated groups of children and young people with health problems. Educational programmes provided in the hospitals are often of value for doctors who are training to be GPs; however, it is important that this education reflects the needs of GP trainees and is not just targeted at specialist registrars or for a particular specialist examination.

Non-work-based learning

You will find that deaneries, often working with their local universities, trusts and social services, provide a variety of courses about child health issues including child protection, immunisation and child development. The RCGP also provides a selection of courses across the UK in both child and adolescent health. The best of these stimulate reflection on real cases seen in your work and help you as a professional to develop the knowledge, skills and attitudes required for high-quality, collaborative care. The changes taking place within child healthcare provide a significant opportunity to develop new ways of learning and teaching, especially in the interprofessional setting. To this end, the Department of Health has collaborated with the all the paediatric medical colleges and e-Learning for Healthcare to produce the Healthy Child Programme learning set which is be available through e-GP (www.e-GP.org). E-learning should be combined with case review and multidisciplinary reflection.
Learning with other healthcare professionals

The effective care of children and young people is a multiprofessional activity with different health professionals working in teams, often across the historical primary and secondary care divide. It is therefore essential that your learning takes place as often as possible with other health professionals. During your training for general practice you should gain experience of working in a collaborative way with other professionals in the team. You should also participate in the practice’s educational programme, audit and critical event meetings.

Interprofessional case-based learning is an effective way for you as a GP to learn about child protection (safeguarding children), and to remove some of the barriers to collaboration. You should participate in interprofessional education programmes provided by child protection teams in each locality. Child protection training often concentrates on physical signs and symptoms of abuse and provides limited understanding of the emotional and psychological implications for adults of early childhood abuse, trauma and neglect, and how these effects might be manifested in the consultation. The report of the Victoria Climbié inquiry argued that child protection is ‘everyone’s business’ and made a strong case for better communication between professionals. The report also made two specific recommendations that are of immediate relevance to a curriculum for the care of children and young people. The report included a recommendation (No. 87 Report, p. 381):

‘The Department of Health should seek to ensure that all GPs receive training in the recognition of deliberate harm to children and in the multidisciplinary aspects of a child protection investigation, as part of their initial vocational training in general practice and at regular intervals of no less than three years thereafter.’

Multiprofessional education and interprofessional education need to be distinguished. In multiprofessional education, different professionals happen to coincide in an educational event of mutual interest. By contrast, interprofessional education involves an explicit examination of different roles. Interprofessional barriers can be a real problem in practice, particularly at times of change or stress within the health service, and this applies as much to education as it does to service delivery. Amongst other health professionals, negative attitudes about medical practitioners wanting to be involved in interprofessional education programmes can be a problem. These conclusions are supported by a survey of Primary Care Trusts, conducted by the London Deanery. This survey revealed that although all localities have Area Child Protection Committees, which are responsible for providing multiprofessional education in child protection, neither GP trainees nor established general practitioners were involved. Others have also reported similar findings. However, successful schemes bringing together GPs, health visitors and community paediatricians are possible. A key component of successful initiatives is that the teaching team should include a mix of professionals who are prepared to look at their own different roles and to challenge the stereotypes that many professionals have about each other.

A further challenge is the national shortage of health visitors. Health visitors, working in close partnership with GPs, have traditionally been central to the provision of child health promotion. Partly in response to the recruitment crisis and, in England and Wales, to the introduction of the Healthy Child Programme (2009), health visitors have recently been redefining their jobs, taking on a greater public health role and, in many areas, withdrawing from GP surgeries. This has caused tension both within and outside the health visiting profession.

---

Some aspects of a curriculum for the care of children and young people will be appropriately delivered in a uniprofessional format (i.e. tailored to the needs of one particular profession), but there should be an increasing emphasis on interprofessional approaches in order to encourage collaboration with other professionals. The challenge involved in this should not be underestimated.
LEARNING RESOURCES

Relevant resources

ACKNOWLEDGEMENTS

This curriculum statement is based on the original statement 8 Care of Children and Young People in the 2007 version of the RCGP Curriculum. It has drawn on various national guidelines and policies, current research evidence and the expertise and clinical experience of practising general practitioners. It also draws on the Royal College of General Practitioners and Royal College of Paediatrics and Child Health booklet The Paediatric Component of Vocational Training for General Practice published in 1997.5

The authors and contributors for this version of the statement are:

Author: Dr Cyrus Fernandes

Contributors: Dr Janice Allister

Editors: Dr Frances Peck, Dr Charlotte Tulinius

Date of this version: April 2013 May 2014

The 2007 version of the statement and subsequent updates can be found on the RCGP website. The Royal College of General Practitioners would like to express its thanks to all the individuals and organisations who have contributed so generously to past and present versions of this statement.
