**Coalition for Collaborative Care**

This toolkit was produced in collaboration with the Coalition for Collaborative Care (C4CC). The Coalition for Collaborative Care is a partnership of 50 national organisations and 2000+ members and followers aiming to achieve a better deal for people with long-term conditions. The Coalition’s purpose is to bring people and organisations together and grow a movement for change around the three ‘C’s – better conversations between health
professionals and the people they support, co-production with people, families and carers and building strong, health-creating communities. With a broad and extensive constituency of support, the Coalition is founded on the principle that more can be achieved by people and organisations working together for a common aim than can be achieved by acting alone.

For more information, visit the C4CC’s website.
